Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, InvalidUsernameException, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]" .

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

```
import java.util.Scanner;
class InvalidUsernameException extends Exception {
    public InvalidUsernameException(String message) {
        super(message);
    }
}

public class Main {

    public static void validateUsername(String username) throws
    InvalidUsernameException {

        if (username.contains(" ")) {
            throw new InvalidUsernameException("Invalid Username: Username
cannot contain spaces");
        }

        if (username.length() < 5) {
```

```
        throw new InvalidUsernameException("Invalid Username: Username must  
be at least 5 characters long");  
    }  
  
}  
  
public static void main(String[] args) {  
  
    try (Scanner scanner = new Scanner(System.in)) {  
  
        if (scanner.hasNextLine()) {  
            String inputUsername = scanner.nextLine();  
  
            try {  
                validateUsername(inputUsername);  
  
                System.out.println("Username is valid: " + inputUsername);  
            } catch (InvalidUsernameException e) {  
  
                System.out.println(e.getMessage());  
            }  
        } catch (Exception e) {  
            System.out.println("An error occurred: " + e.getMessage());  
        }  
    }  
}
```

Status : Correct
